Make your AWS account before you arrive

AWS Student Community Day Hyderabad 2026 · Friday 30 October · VJIT · a step by step guide

Do this today, at home, not at the venue. Sign-up needs an OTP on your phone and sometimes a card check that can take a few minutes to go through. Campus Wi-Fi with 200 people on it is the worst place to wait for that.

You need: a laptop, your phone (for OTP), an email address you can open, and 10 to 15 minutes. Use your **own** email, not a college account you might lose.

STEP BY STEP

1 Open the AWS sign-up page

On your laptop, go to `aws.amazon.com` and click **Create an AWS Account** (or **Sign up**) at the top right.

If you see an option to **sign up with Google, GitHub, Apple or Amazon**, take it: for most new customers that route needs **no card** and gives up to **USD 200 in free credits**. AWS is still rolling it out, so you may not see it yet. If not, carry on below.

2 Email and account name

Enter your email and an account name (your own name is fine). AWS emails you a code: type it in. Then set a strong password and save it somewhere safe.

3 Contact details

Choose **Personal** (for your own projects). Fill in your name, phone number and address exactly as on your ID. Country: **India**.

4 Choose your plan: Free

When asked, pick the **Free plan**. It cannot run up a surprise bill: nothing is charged unless you choose to upgrade to a paid plan later.

5 Card check (if asked)

Indian accounts may be asked for a debit or credit card. AWS charges **INR 2** to check the card and refunds it. Your bank may send an OTP: enter it.

- Use a card with **online / international transactions turned on** (turn it on in your bank app if the payment fails).
- A parent's card is fine if they agree. Nothing else is charged on the Free plan.

6 Phone verification

Enter your mobile number. AWS sends a code by SMS (or calls you). Type it in.

7 Support plan: Basic (free)

Choose **Basic support, free**. Do not pick a paid support plan.

8 Sign in once

Go to `console.aws.amazon.com`, choose **Root user**, and sign in with your email and password. If you can see the AWS Console home page, you are done.

TWO MINUTES TO STAY SAFE

Turn on MFA

In the console, click your name at the top right, then **Security credentials**, then **Assign MFA device**. Use an authenticator app on your phone (Google Authenticator, Microsoft Authenticator).

Never share these

Do not share your password, MFA codes or access keys with anyone, and never paste access keys into GitHub or a chat. Nobody from our team will ask for them.

IF SOMETHING GOES WRONG

- **Card declined:** turn on online and international payments in your bank app. If it still fails, try a different card.
- **"Account being activated" for a while:** normal, it can take a few minutes. Watch your email for the welcome message.
- **No OTP on your phone:** check the number and country code (+91), then choose the call option.
- **Still stuck?** Come to the workshop anyway and tell a volunteer before it starts. Reply to the event email if you need help today.

ON THE DAY

Bring your **laptop fully charged**, its **charger**, and your **phone** (for sign-in codes). Sign in to the AWS Console on your laptop browser before the workshop starts so you are ready to build from minute one.
